SUMMARY

Built and deployed an AI-assisted personal interview coach on Cloudflare. Owned an internal .NET/React RAG application end to end at MAQ, including retrieval, agent orchestration, evaluation and deployment; contributed merged upstream fixes.

TECHNICAL SKILLS

Applications: React, Vue.js, Java, Spring Boot, C# / .NET, REST APIs, MySQL, Redis

Applied AI: RAG, agent orchestration, context construction, evaluation; personal Python / Flask

Quality & delivery: Regression tests, API debugging; personal Cloudflare Workers AI, Durable Objects, Workflows

EXPERIENCE

Associate Software Engineer | MAQ Software

Nov 2025 - Present

- Owned end-to-end development of an internal RAG-based, multi-agent slide-deck application using C#/.NET and React, including retrieval and indexing, agent orchestration, template mapping, evaluation and deployment.
- Developed Java/Spring Boot functionality for a separate internal business application, supporting data processing and security requirements.
- Collaborated directly with business stakeholders while developing internal application features.

Associate Software Engineer Intern | RecruitCRM

Aug - Oct 2025

- Built responsive Vue.js / TypeScript interfaces and Spring Boot REST APIs with authentication, role-based access control and automated tests.
- Optimised MySQL queries and API paths; collaborated through pull requests and code review.

Software Engineer Intern | CEERAS

Feb - Jun 2025

- Built a distributed bidding system with asynchronous processing and Redis caching; used Docker, Kubernetes and GitHub Actions for delivery.

SELECTED PROJECTS

Interview Coach | Personal project, deployed on Cloudflare | [Repo](#) | [Live](#)

- Built and deployed; AI-assisted with prompt history in the repo. Combines a static chat UI, Workers AI, per-session Durable Object memory and a summarization Workflow.

Personal project: [Legal AI Service](#) | Python, Flask, LLM APIs

- Handled transient LLM API errors with bounded retries; added regression tests for JSON-format failures, retrieval fusion and citation checks.

OPEN SOURCE

[Spring Boot #50779](#) | [utils/coreutils](#) - Merged fixes

Fixed a JUL bridge install/uninstall asymmetry across Log4J2 and Logback and added regression tests. Merged 4 fixes into [utils/coreutils](#) (Rust reimplementation of GNU coreutils): `join -e` filler for empty fields, test integer comparison beyond `i128`, `chmod umask` reporting, `numfmt --format` error-message escaping.
