

Dhruv Rastogi

Backend Engineer — Java · Spring Boot · Cloud · Distributed Systems

Email: dhruvrastogi2004@gmail.com · LinkedIn: [linkedin.com/in/dhruv-rastogi-3b744032b](https://www.linkedin.com/in/dhruv-rastogi-3b744032b) · GitHub: github.com/dhruv-15-03 · Location: India (open to relocation)

SUMMARY

1.5+ years of hands-on production software engineering across three roles at three companies, primarily in Java and Spring Boot on Microsoft Azure. Currently at MAQ Software through 31 October 2026, building ETL pipelines that process 500K+ records a day and owning CI/CD and reliability for services on a 99.9% uptime SLA. Author of two open-source projects, including DhrLang, a statically-typed language built end to end (v4.0.1, JVM + EVM backends + a formal verifier, 1,400+ tests in CI). Solid fundamentals in data structures, algorithms (LeetCode Knight, 1,000+ solved), and system design.

SKILLS

Languages: Java (primary), Python, JavaScript / TypeScript, SQL, Bash
Backend: Spring Boot, REST APIs, microservices, authentication, role-based access control (RBAC), async / queue-based processing
Cloud & DevOps: Microsoft Azure (Functions, Fabric, Databricks, DevOps), AWS (foundational), Terraform, Docker, Kubernetes, CI/CD, GitHub Actions
Data: MySQL, PostgreSQL, MongoDB, Redis, ETL pipelines
AI / ML: Applied machine learning (scikit-learn), Retrieval-Augmented Generation (RAG) & semantic search, MLOps (metrics, data-drift monitoring)
Testing & Tooling: JUnit, PIT mutation testing, JaCoCo, Git; compiler design (lexer / parser / IR / JVM bytecode), Language Server Protocol (LSP)

EXPERIENCE

Associate Software Engineer · MAQ Software Nov 2025 – Present · ends 31 Oct 2026 · India

Java · Python · Azure Fabric · Databricks · Azure Functions · Terraform · Azure DevOps

- Build and run ETL pipelines on Azure Fabric and Databricks that process 500,000+ records a day at 99.5% accuracy, cutting manual data prep by about 60%.
- Own CI/CD for 10+ Azure Function Apps using Azure DevOps and Terraform, enabling zero-downtime releases and roughly 40% faster deployments.
- Improved alerting, monitoring, and reliability tuning for services running on a 99.9% uptime SLA.

Associate Software Engineer (Contract) · RecruitCRM Aug 2025 – Oct 2025 · Remote

Java · Spring Boot · MySQL · REST APIs · Vue.js · RBAC

- Shipped 8+ REST APIs for CRM workflows, lead enrichment, and live data access, with 85% test coverage on the new code.
- Implemented authentication and role-based access control across the backend.
- Reduced API response times by 30% through query and execution-path optimization.

Software Engineer Intern · CEERAS Jan 2025 – Jun 2025 · Remote

Java · Microservices · Docker · Kubernetes · Redis · GitHub Actions

- Built a distributed bidding system handling 10,000+ transactions a day at sub-second latency.
- Added asynchronous processing and a Redis cache layer to raise end-to-end throughput.
- Set up the Docker, Kubernetes, and GitHub Actions pipeline for build, test, and deployment.

PROJECTS

github/spec-kit — merged contribution (GitHub-owned, 124k+ stars) github.com/github/spec-kit/pull/3413

PR #3413, merged 23 July 2026 into `github/spec-kit` — a GitHub-owned, MIT-licensed Spec-Driven Development toolkit with 124k+ stars. Added configurable Conventional Commit support to the git extension: +724 / -9 across 7 files.

DhrLang — statically-typed JVM + EVM language (v4.0.1) github.com/dhruv-15-03/DhrLang

Compiler written end to end: lexer, parser, type checker, IR lowering, and three execution backends (AST, IR VM, JVM bytecode) plus an EVM/Solidity target, and a from-scratch formal verifier (symbolic execution + Fourier–Motzkin, no SMT solver) that emits SARIF Code Scanning. Ships an LSP server and a published VS Code extension. 14 releases; 1,400+ tests with JaCoCo + PIT mutation testing.

boot-usage — Spring Boot Actuator starter (Apache-2.0) github.com/dhruv-15-03/boot-usage

Drop-in Spring Boot starter that exposes Actuator endpoints for runtime dependency analysis. Published as a reusable Java package.

AI-Court — ML legal-outcome platform github.com/dhruv-15-03/AI-CourtRoom

A Python/Flask ML service that predicts Indian legal-case outcomes: a TF-IDF + boosted Random Forest classifier (91.8% test accuracy, 0.83 macro-F1 across 10,838 cases) with semantic precedent retrieval, confidence-based abstention, and an MLOps spine (Prometheus metrics, data-drift monitoring). Java + React app shell; deployed on Render and Vercel.

EDUCATION

B.Tech, Computer Science & Engineering (AI) June 2026

Meerut Institute of Engineering and Technology (MIET) / Dr. A.P.J. Abdul Kalam Technical University (AKTU), India · 8.55 / 10.

CERTIFICATIONS

Selected issuer-verified credentials — [DevOps Engineer Expert, AZ-400](#) · [Fabric Data Engineer Associate, DP-700](#) · [Azure Developer Associate, AZ-204](#) · [SQL AI Developer Associate](#)
Oracle Cloud Infrastructure 2025 — [Developer Professional](#) · [DevOps Professional](#)
[MongoDB Associate Developer, Java](#) · [GitHub Copilot Certified](#)

ACHIEVEMENTS

LeetCode Knight (1,000+ problems solved) · Smart India Hackathon 2024 — Top 50 nationally · ISC Class XII — 96.75% (Rank 1 on campus)

Open to Software Engineer, Backend, and AI Engineer roles — remote, hybrid, or relocation.
