SUMMARY

Software engineer building RAG and multi-agent applications. Owned an internal AI slide-deck product using C#/.NET and React; personal Python work covers embeddings, hybrid retrieval, source-linked generation and structured LLM output.

TECHNICAL SKILLS

Languages: Python, TypeScript / JavaScript, SQL, Java, C#

Applied AI: RAG, embeddings, semantic / vector search, prompt design, context construction, agent orchestration

Evaluation & integration: Structured JSON outputs, output evaluation, regression testing, sentence-transformers

Backend & delivery: Flask, REST APIs, React, MySQL, Redis, Docker, GitHub Actions

EXPERIENCE

Associate Software Engineer | MAQ Software

Nov 2025 - Present

- Developed Java/Spring Boot functionality for a separate internal business application, supporting data processing and security requirements.
- Collaborated directly with business stakeholders while developing internal application features.
- Owned end-to-end development of an internal RAG-based, multi-agent slide-deck application using C#/.NET and React, including retrieval and indexing, agent orchestration, template mapping, evaluation and deployment.

Associate Software Engineer Intern | RecruitCRM

Aug - Oct 2025

- Built responsive Vue.js / TypeScript interfaces and Spring Boot REST APIs with authentication, role-based access control and automated tests.
- Optimised MySQL queries and API paths; collaborated through pull requests and code review.

Software Engineer Intern | CEERAS

Feb - Jun 2025

- Built a distributed bidding system with asynchronous processing and Redis caching; used Docker, Kubernetes and GitHub Actions for delivery.

SELECTED PROJECTS

Legal AI Service | Python, Flask, sentence-transformers

- Built semantic indexing and hybrid retrieval, combining sentence-transformer embeddings and dense vector search with TF-IDF results through reciprocal rank fusion.
- Constructed source-linked context and prompts for RAG answers; added heuristic citation checks that flag case references unmatched to retrieved sources.
- Implemented structured JSON output handling and regression tests for parsing, retrieval fusion and citation checks.

AlgoVisualizer | React, TypeScript, Pyodide, D3

- Built a browser-based algorithm and ML lab running Python in a Web Worker, with typed trace events and interactive D3/SVG visualisations.

OPEN SOURCE

Spring Boot #50779 | Merged upstream bug fix

Fixed a JUL bridge install/uninstall asymmetry across Log4J2 and Logback and added regression tests.

EDUCATION

B.Tech, Computer Science & Engineering (AI Specialization) | 2026

Meerut Institute of Engineering & Technology (MIET), affiliated to AKTU | CGPA: 8.55 / 10
