SUMMARY

Java/Spring Boot engineer building REST APIs and data-backed applications with JPA/Hibernate, MySQL and Redis. Work includes API security, SQL optimisation, JUnit/Mockito tests and a merged Spring Boot correctness fix.

TECHNICAL SKILLS

Backend: Java, Spring Boot, REST APIs, JPA / Hibernate, MySQL, Redis

Security & quality: Spring Security, authentication, RBAC, SQL optimisation, JUnit, Mockito

Distributed systems: Asynchronous processing, Redis caching; Docker, Kubernetes, GitHub Actions, CI/CD

Observability: Spring Boot Actuator, Prometheus, application logs

EXPERIENCE

Associate Software Engineer | MAQ Software

Nov 2025 - Present

- Developed Java/Spring Boot functionality for an internal business application with data processing and security requirements, working directly with business stakeholders.
- Collaborated directly with business stakeholders while developing internal application features.
- Owned an internal RAG-based, multi-agent slide-deck application using C#/.NET and React, including retrieval, orchestration, template mapping, evaluation and deployment.

Associate Software Engineer Intern | RecruitCRM

Aug - Oct 2025

- Built Java/Spring Boot REST APIs using JPA/Hibernate and MySQL, with automated tests using JUnit and Mockito.
- Implemented authentication and role-based access control with Spring Security.
- Optimised SQL queries and API execution paths; collaborated through Git pull requests and code reviews.

Software Engineer Intern | CEERAS

Feb - Jun 2025

- Built a distributed bidding system with asynchronous processing and Redis caching; used Docker, Kubernetes and GitHub Actions for delivery.

SELECTED PROJECTS

AI Courtroom | Spring Boot, React, MySQL, Redis

- Built role-based case-management APIs and a React interface integrated with a separate Python AI service.
- Added per-host Resilience4j circuit breakers that fail fast for unavailable AI dependencies and distinguish upstream server errors from client errors.

boot-usage | Spring Boot Actuator starter

- Built a starter for runtime dependency and usage analysis, available through JitPack and listed in the awesome-java catalog.

OPEN SOURCE

Spring Boot #50779 | Merged upstream bug fix

Fixed a JUL bridge install/uninstall asymmetry across Log4J2 and Logback and added regression tests.

EDUCATION

B.Tech, Computer Science & Engineering (AI Specialization) | 2026

Meerut Institute of Engineering & Technology (MIET), affiliated to AKTU | CGPA: 8.55 / 10
